I build software that people use every day at work. Since May I have been lead developer on the internal platform Altus Corp now runs its whole business on, and outside of that I build AI products end to end, model to interface.

EXPERIENCE

Altus Corp Dashboard *the platform the company runs on*

May 2026 – Present

Lead Developer, Altus Corp, Mumbai

In four months this went from a task tracker to the system the whole company runs on: 190 screens, 215 database tables and about 100,000 lines of code, with 26 jobs that run on their own overnight, delivered as a web app and two mobile apps.

- Replaced about 15 spreadsheets with one system that is now the company's daily record: work and approvals, quarterly goals, performance reviews, payroll, client collections, hiring through to exit paperwork, and training.
- Built the payroll engine that calculates salaries, deductions and payslips, and the receivables system that tracks what clients owe and follows up on schedule. Real money runs through both every month.
- Built an attendance system with fingerprint punch-in and checks that made faking it very hard: punches tied to one registered device, blocked from fake-GPS phones and from outside the office network. Rolled out in warning-only mode first so a bug could never lock staff out.
- Added an AI assistant that answers plain-English questions about the sales pipeline and draws the chart for you, plus voice notes that transcribe themselves in mixed Hindi and English.
- Shipped three clients off the same system: the web app, a cross-platform mobile app and a native Android app. Sole developer on all three, deploying to production continuously since May.

Also delivered at Altus: a seven-app operations suite for client Manan Vasa, and the marketing site for Carbide India.

SELECTED PROJECTS

Beauty Recommendation System & Storefront *solo build*

2026

- A recommendation engine trained on two million real Amazon shopping interactions across 60,000 beauty products. Four search methods run in parallel, a ranking model picks the final order, and a last pass strips out near-duplicates and items the customer is likely to send back. It answers in about 68 milliseconds.
- Matches foundation and concealer shades to skin tone from a selfie using real colour science rather than guesswork. When it cannot be confident of a match it says so instead of guessing, because a wrong shade is the number one reason beauty orders get returned.
- Comes with the shop itself: browsing, filters, cart, checkout, accounts and order history, priced in rupees with GST handled properly and every price traced back to its source. 175 automated tests cover the whole thing, including the cases where it is supposed to fail.

• **Satya Drishti** · [satyadrishti.vercel.app](#) · founder and sole developer

Live platform that catches AI-faked voices, faces and coerced language during a call as it happens. Four detection models feed one decision, and everything runs on the user's own machine, so no audio or video leaves it.

• **MarketPlus** · *launching Q3 2026*

Live markets dashboard covering US and international stocks, crypto, forex and commodities, with AI-written explanations of why a price moved and alerts pushed to email, phone or webhook.

• **Monte Karlo** · [github.com/heshFr/MonteKarlo](#)

Scores which of your relationships are quietly going cold, then runs a thousand simulations per person to work out which single action is most likely to bring it back.

• **Silent Drift** · DUHacks 5.0, team of 2

Built in 26 hours: forecasts seawater creeping into coastal groundwater through 2030 for Indian districts home to more than 10 million people, with a simulator costing out each fix.

SKILLS

Build: TypeScript, Python, React, Next.js, FastAPI, Node, Kotlin, React Native, SQL, PostgreSQL, Supabase, Firebase, Redis, Vercel

AI and data: PyTorch, Hugging Face Transformers, scikit-learn, LightGBM, recommender systems, computer vision, fine-tuning, ONNX, Claude and Gemini APIs, pandas, NumPy, fairness and evaluation analysis, Plotly, Recharts

How I work: solo ownership end to end, continuous deployment, automated testing with Playwright and Vitest, Git, writing things down

EDUCATION

B.Sc. Data Science, School of Data Science & Business Intelligence, Patkar-Varde College, Mumbai

Aug 2025 – Present

Higher Secondary, Pioneer College, Dadar · cleared MHT-CET, JEE Main and CUET · Secondary, I.E.S. New English School, 89% 2025 / 2023

Hackathons: DUHacks 5.0 (GDG on Campus DDU) · DevFest Goa · BeachHack S7 · ETHDenver 2026

Certifications: Deloitte Data Analytics (Forage) · HackerRank Python · ScholarHat .NET · Udemy Java **Languages:** English, Hindi, Marathi
